MUHAMMAD SALEH JANJUA

Full-Stack / Web Developer

+92 3135762088 | MuhammadSalehJanjua@gmail.com | linkedin.com/in/muhammadsalehjanjua

Summary

Recent Computer Software Engineering graduate specializing in full-stack web development with React.js, Node.js, and Next.js. Experienced in building scalable, secure end-to-end applications and automating build, test, and deployment workflows with Jenkins CI/CD pipelines. Proven ability to thrive in remote, Agile environments delivering high-performance interfaces and robust backend architectures.

Education

Bachelor of Science (BS) in Computer Software Engineering / *Pak-Austria Fachhochschule: Institute of Applied Sciences & Technology* Oct 2022 – Jun 2026

Subjects: Database Systems, Software Requirement Engineering, Software Design and Architecture, Software Quality Engineering, Full Stack Development, Web Engineering, Software Construction and Development, Software Project Management, Software Testing Tools and Techniques.

Work Experience

Web Engineering Intern / *MimaarAssociates* June 2025 – Sept 2025

- **Full-Stack Architecture:** Architected and deployed end-to-end web solutions utilizing React.js and Node.js, resulting in a 20% improvement in platform stability through modular component design.
- **Database Engineering:** Designed and optimized relational schemas in PostgreSQL and managed real-time data synchronization via Firebase, supporting 150+ concurrent users during peak traffic.
- **Security & Auth:** Engineered secure user authentication workflows using Firebase Auth, reducing unauthorized access attempts by 40% through robust validation rules.
- **API Development:** Developed and consumed RESTful APIs to bridge frontend components with backend services, streamlining data flow and reducing latency by 15%.
- **CI/CD Automation:** Built and maintained a Jenkins pipeline (lint, test, Prisma migrate, build, deploy) for the team's Next.js/TypeScript platform, automating what had been a manual release process.

Front-end Developer Intern (Remote) / *InzeMarketing* June 2024 – Sept 2024

- **Performance Optimization:** Refactored legacy CSS and JavaScript, improving Google Lighthouse performance scores by 30% and reducing page load times by 1.2 seconds.
- **Responsive Engineering:** Engineered 100% responsive interfaces for high-traffic web pages, leading to a 45% increase in mobile user engagement.
- **Marketing Integration:** Integrated Google Analytics and optimized SEO metadata, contributing to a 25% increase in organic search visibility for client sites.

Projects

Jenkins CI/CD Pipeline – MimaarAssociates Platform

- Designed and implemented an end-to-end Jenkins pipeline for a Next.js/TypeScript full-stack application, automating lint, test, database migration, build, and deployment stages on every push.
- Integrated Prisma ORM with PostgreSQL migrations (`prisma generate` / `migrate deploy`) into the pipeline, ensuring schema changes are applied safely and consistently on each release.
- Automated zero-downtime deployment using `rsync` and PM2 process management, eliminating manual server updates and reducing release effort.
- Managed environment secrets (database and auth credentials) securely through Jenkins credentials binding, keeping sensitive configuration out of source control.

Cryptojacking Detection Tool using Machine Learning Final Year Project (In Progress)

- Developed a machine learning-based system to detect unauthorized crypto-mining with 90% accuracy using behavioral analysis of CPU and memory metrics.
- Built a monitoring agent in Python that interfaces with a REST backend to provide real-time threat detection and automated alerts.

- Created a comprehensive visualization dashboard in React.js to monitor system health and security anomalies.

Pixel Art Canvas Web Application

- Built an interactive pixel art tool with adjustable grid sizes (8x8 to 64x64) and a customizable color palette.
- Added real-time drawing and grid visibility toggling through layers.

Agile Capacity Tracker

- Designed a dashboard to visualize team workloads and sprint capacity.
- Integrated with GitHub API for real-time updates on task completion and repository activity.
- Streamlined project management by providing a visual representation of team velocity.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, C++, SQL (MySQL, PostgreSQL)
Frontend: HTML5, CSS3, React.js, Next.js, UI/UX Design (Figma)
Backend: Node.js, Express.js, Prisma ORM, NextAuth
DevOps & CI/CD: Jenkins, Docker, GitHub Actions basics, PM2, rsync, Git/GitHub
Databases & Tools: PostgreSQL, MySQL, Firebase, VS Code, MySQL Workbench, IntelliJ IDEA
Design: Adobe Premiere Pro, Aseprite (Pixel Art)
Soft Skills: Remote Collaboration, Agile/Scrum, Technical Documentation, Problem-Solving

Certifications

- Microsoft Career Certificate — Career Essentials in Software Development (2024)
